

CyMetric reflects and facilitates Organization cybersecurity strategy and drives the process to achieve the overall mission

## **cymetric™ RISK MANAGEMENT AND COMPLIANCE PLATFORM**

CyMetric is a one-stop shop for understanding and documenting the strategy, accountability, activities and status of an organization's cybersecurity program.

The CyMetric platform is a centralized repository that:

- Defines activities and tactics that satisfy regulatory, cyber framework, insurance and contractual requirements written in language technology resources understand
- Documents the cybersecurity and privacy program components that organization leadership, state agencies or other stakeholders require
- Directly ties organization network and security processes to elements of a cybersecurity framework, compliance obligation, insurance requirement or any other business or auditor requirement
- Enables the assessment of the cyber program to identify risk
- Produces reports and dashboards that communicate the status of the program
- Helps identify gaps and risks in the model that need to be addressed and prioritized
- Demonstrates progress of the cyber risk program over time at the organization or individual system level
- Utilize industry standard cybersecurity models from NIST, Center for Internet Security, ISO, as well as industry specific guidance from CISA and COSN (TLE)
- Adapts to changes in applicable laws or framework requirements by proactively delivering updated program recommendations reflecting guidance from New York based law firm, Harris Beach Murtha
